## ABOUT US

Technology Behind  
the System

Inspirations

01

# Understanding The need

- 
- **Gait Monitoring systems are needed in every field and here are some of these fields :**

- Healthcare
- Athletic Improvement
- Research and Education
- Rehabilitation Support
- Movies & Games Industry

# SOME APPLICATIONS:

**PHYSICAL  
REHABILITATION**

**MOTION  
CAPTURE**

**ATHLETIC  
IMPROVEMENT**

# SOME APPLICATIONS:

**PHYSICAL  
REHABILITATION**

**UNIVERSITY OF  
DELAWARE**

# SOME APPLICATIONS:

**MOTION  
CAPTURE**

# SOME APPLICATIONS:

**ATHLETIC  
IMPROVEMENT**

02

# FEATURES AND FUNCTIONALITY

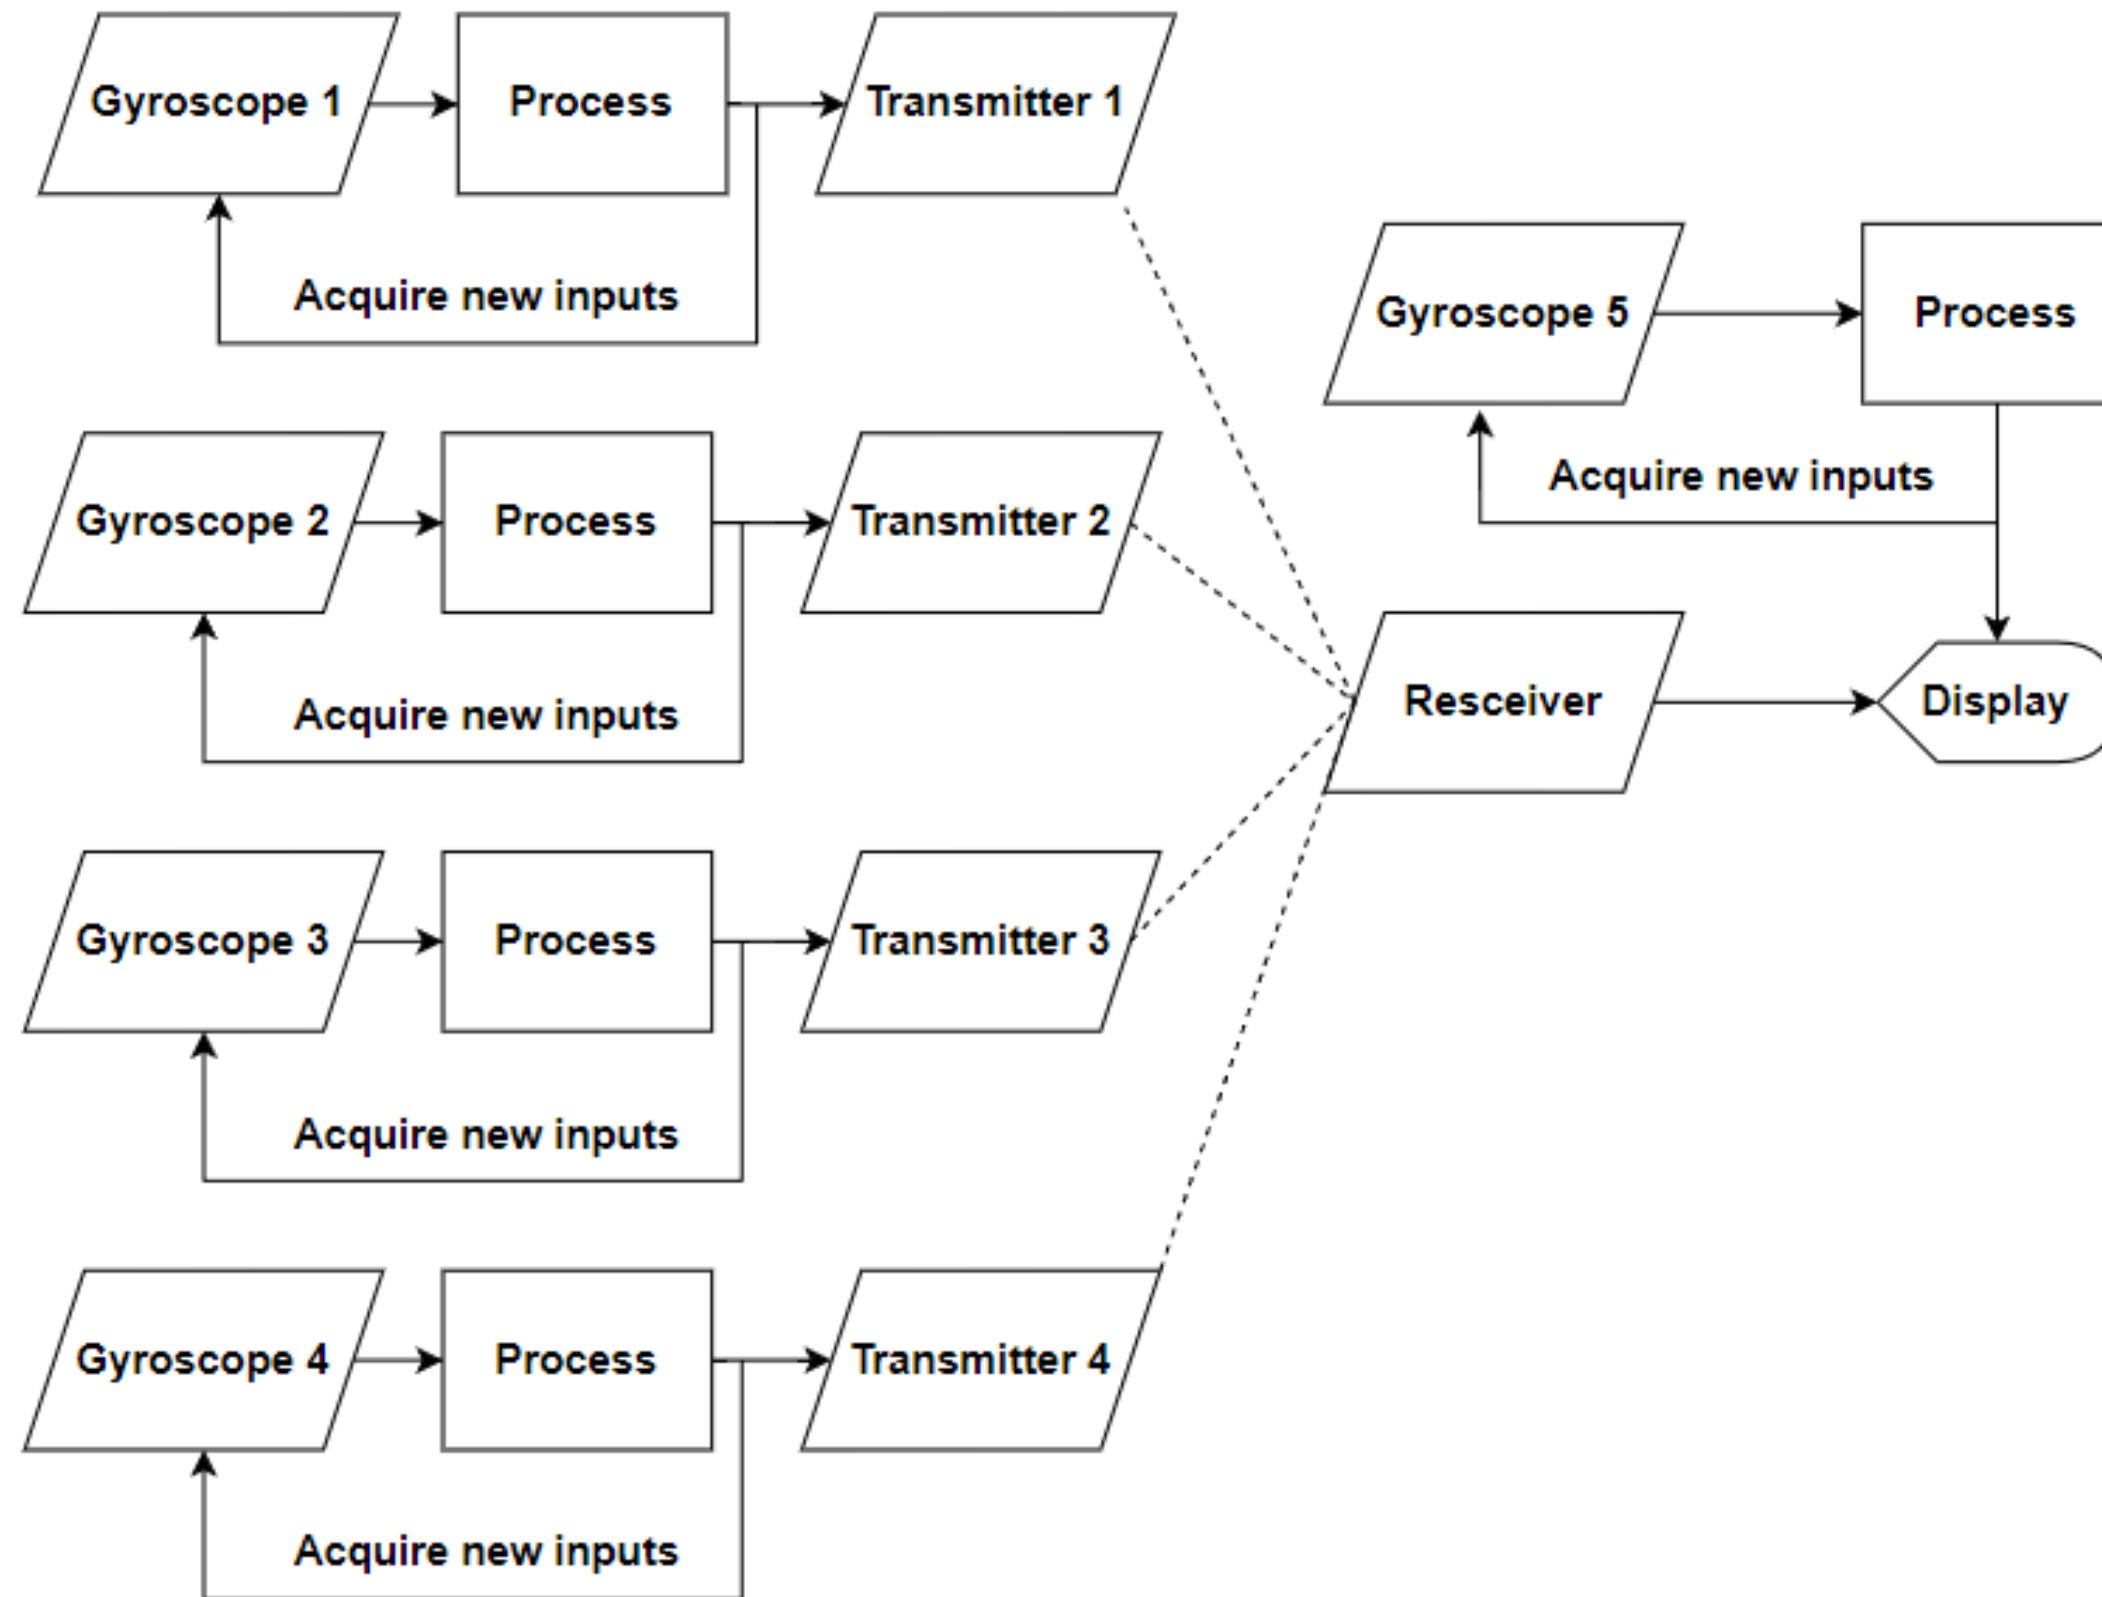

# FEATURES OF OUR SYSTEM:

- Has high sensitivity
- Our system is cheap in price compared to the big labs
- Small in size
- Consumes less power

**OUR SYSTEM USES ITS RESOURCES EFFECIENTLY  
TO PROVIDE THE REQUIRED READINGS**

03

# SYSTEM'S BLOCK DIAGRAM

04

# TECHNOLOGY BEHIND THE SYSTEM

# **HARDWARE**

# OVERVIEW

Receiver

Transmitter

# AVR ATmega32

The controller embedded in the Arduino board which is compatible with SPI and I2C communication protocols

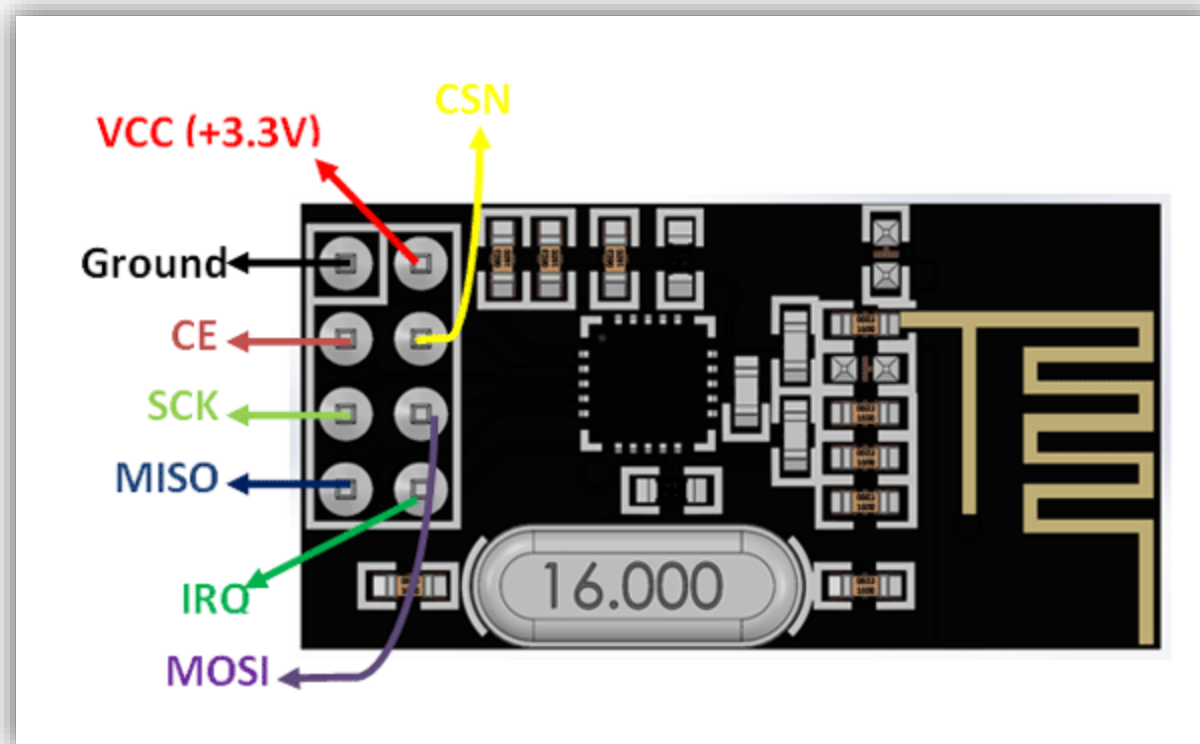

# MPU 6050

3-axis gyroscope and a 3-axis accelerometer that uses I2C communication protocol. the world's first Motion Tracking device designed for the low power, low cost, and high-performance requirements

# NRF24L01

A transceiver used to send readings from all joints into one controller and uses SPI communication protocol, It uses the 2.4 GHz band and can operate with baud rates from 250 kbps up to 2 Mbps. If used in open space and with lower baud rate its range can reach up to 100 meters

# HC-05

Bluetooth module used to send all readings from the master controller to the serial connected device and uses UART communication protocol and has a range of 10 m

05

# INSPIRATION

We aim to reach a project near to “[IMU Motion Capture](#)”. Our idea is to recreate this project and send the information to the pc mobile phone or any serial connected device and display it on screen .

**THANK**

**YOU**
